Variable Chamber Baler Wrapper Combination
Massey Ferguson RB 4160V and RB 4180V variable chamber balers share a common platform and produce bales up to 1.60m or 1.80m in diameter respectively and feature patented bale formation system with Constant Pressure System (CPS) that combines spring and hydraulic action producing dense and uniform bales.

Consistent bale density is essential for all baled products, and the new range of MF variable chamber round balers offer farmers the best solution due to their class-leading compaction, cutter and pick-up capabilities.

Massey Ferguson RB 4160V and RB 4180V round balers share a common platform and produce bales from 0.9m up to 1.60m or 1.80m in diameter respectively.
2.00m, 2.25m or 2.40m pick-up options with a camless design offer a higher working speed, reduced maintenance and a much quieter operation in the field.

A range of models, with feeder rotor or cutters with 13, 17 or 25 knives is available.
Four seamless, double-ply belts provide smooth running and exceptional service life.
The Constant Pressure System (CPS) combines spring and hydraulic action and ensures constant pressure during the bale formation, depending on the selected bale diameter.
Varionet, the net wrapping system, can handle all net widths and provides excellent side-to-side bale coverage for improved stability in transit and storage.
